Dr Simon Orchard

Molecular Orbital Theory - Benzene

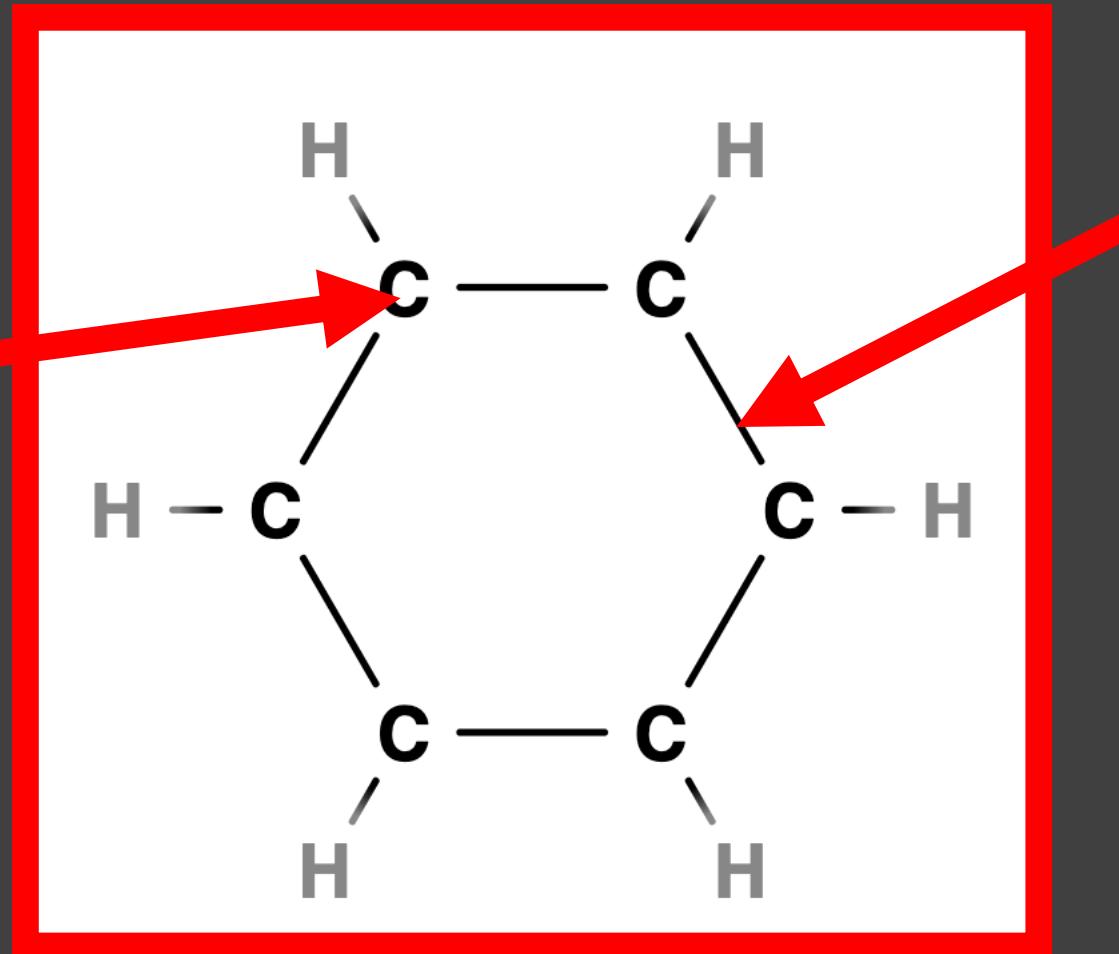

These slides may be downloaded at <https://www.chemistrytuition.net/>

Benzene

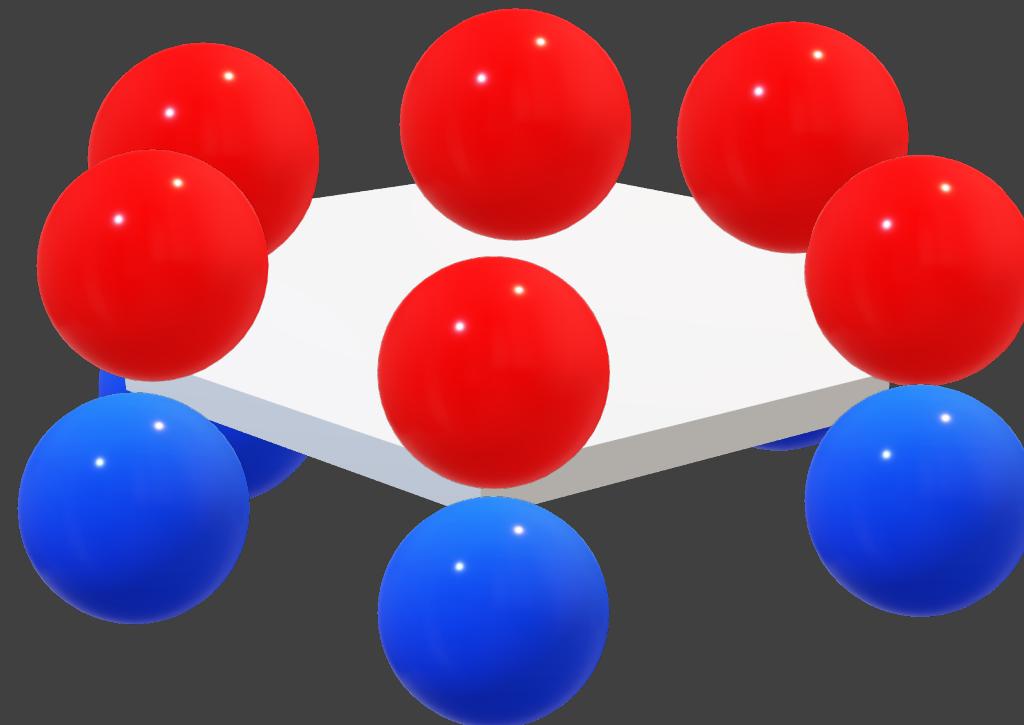

Benzene - sigma framework

Each carbon atom forms sp^2 hybrid orbitals.

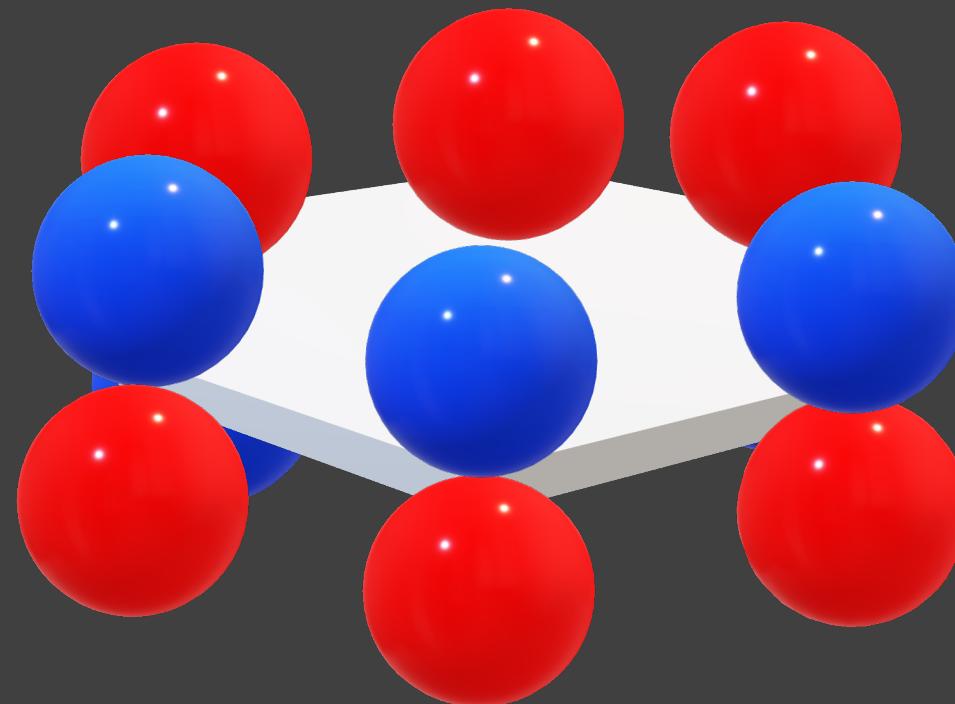

These then bond to produce three sigma molecular orbitals.

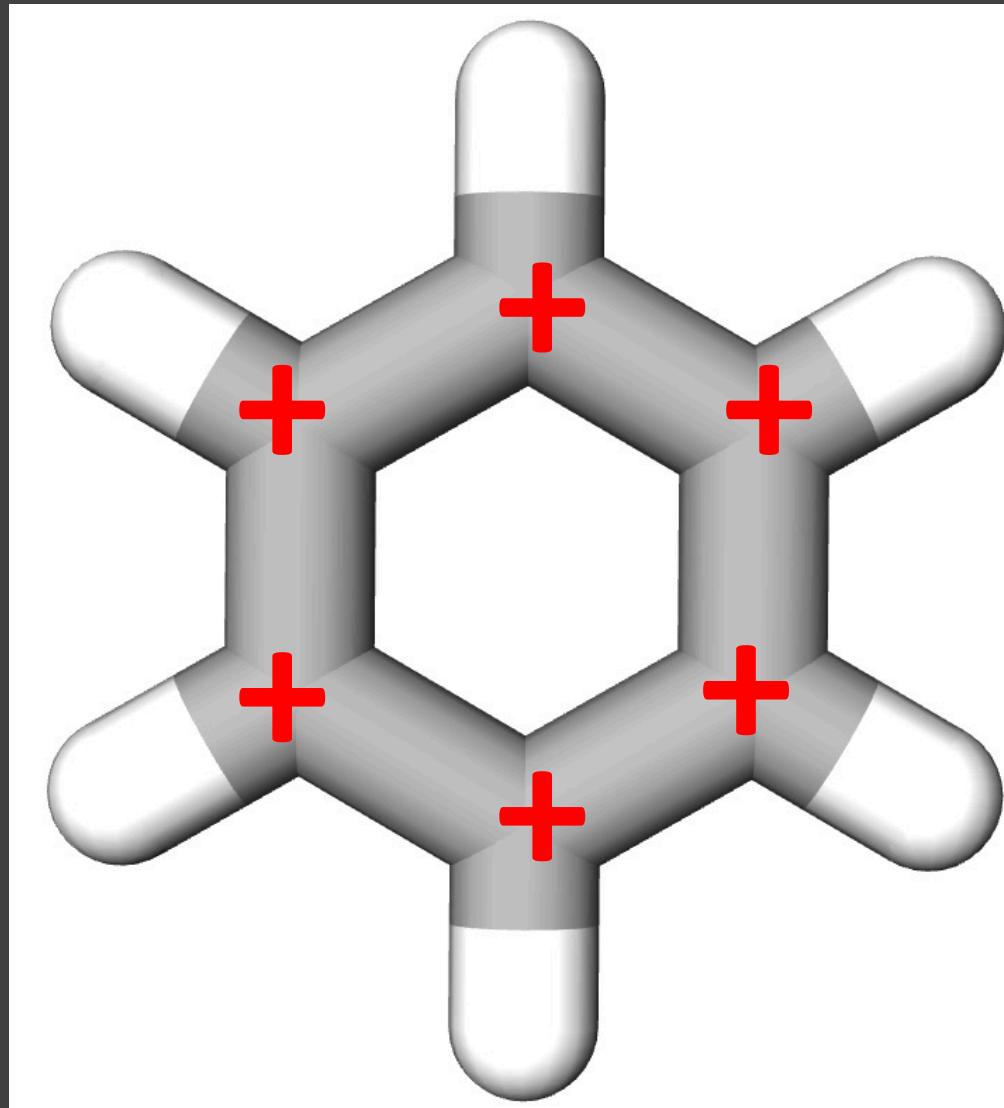

Benzene – pi bonding

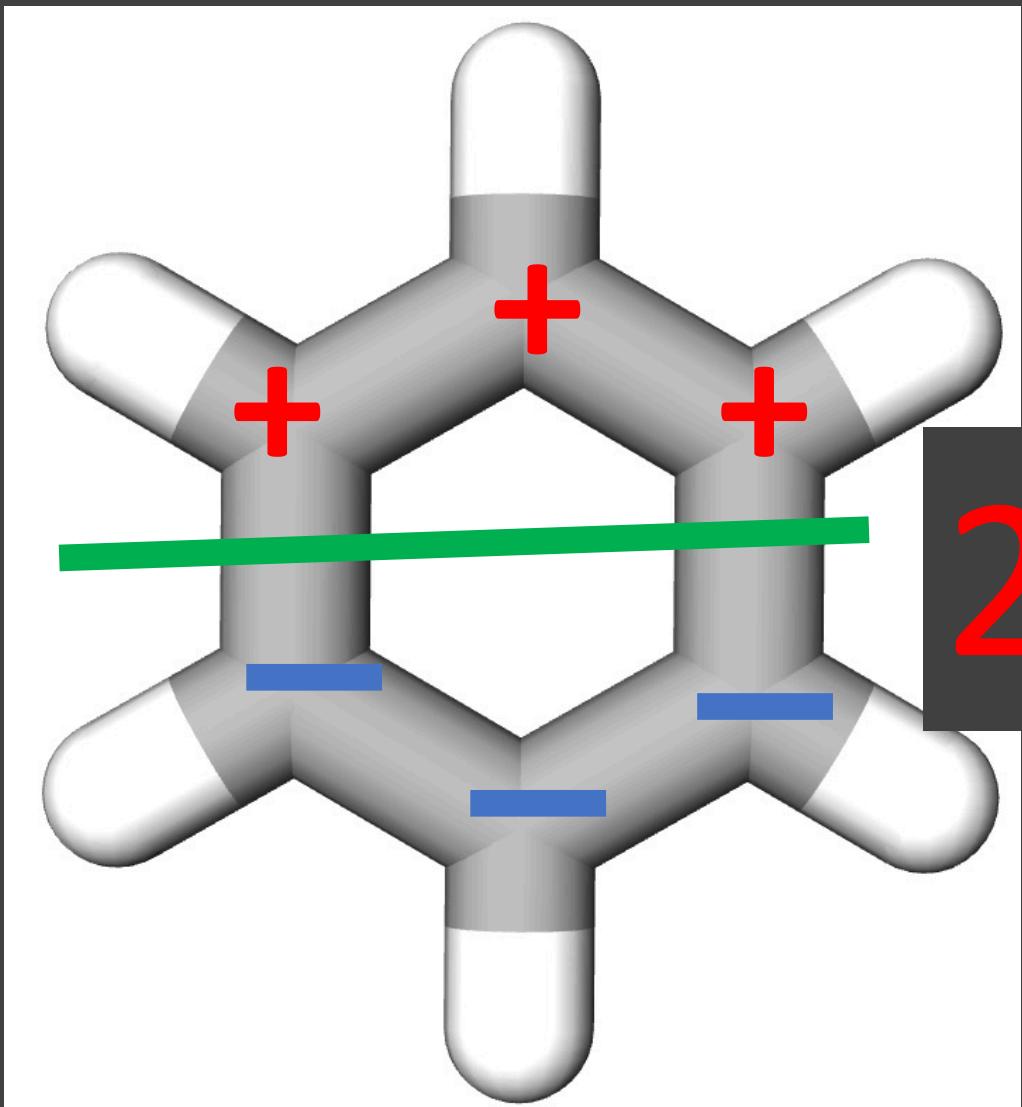

Benzene – pi bonding

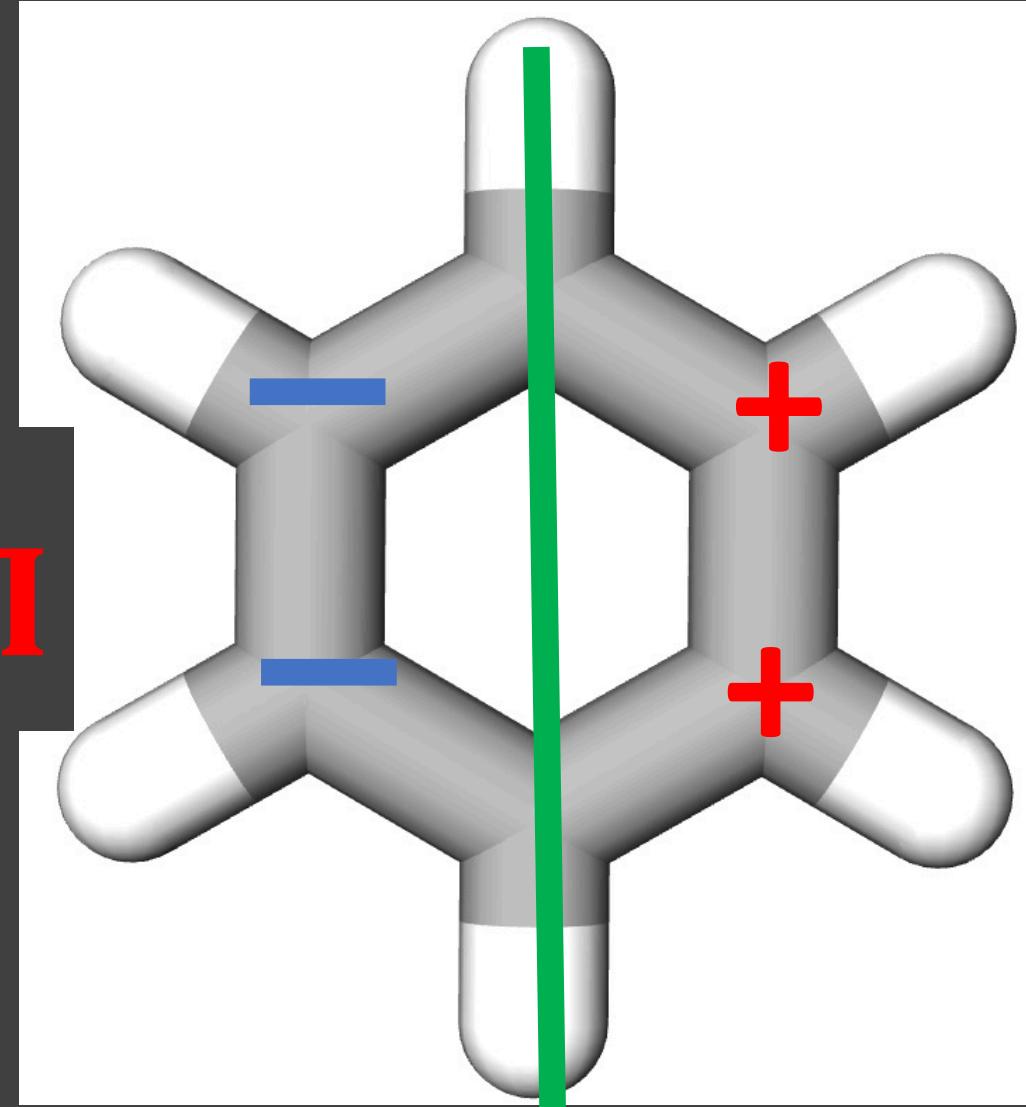

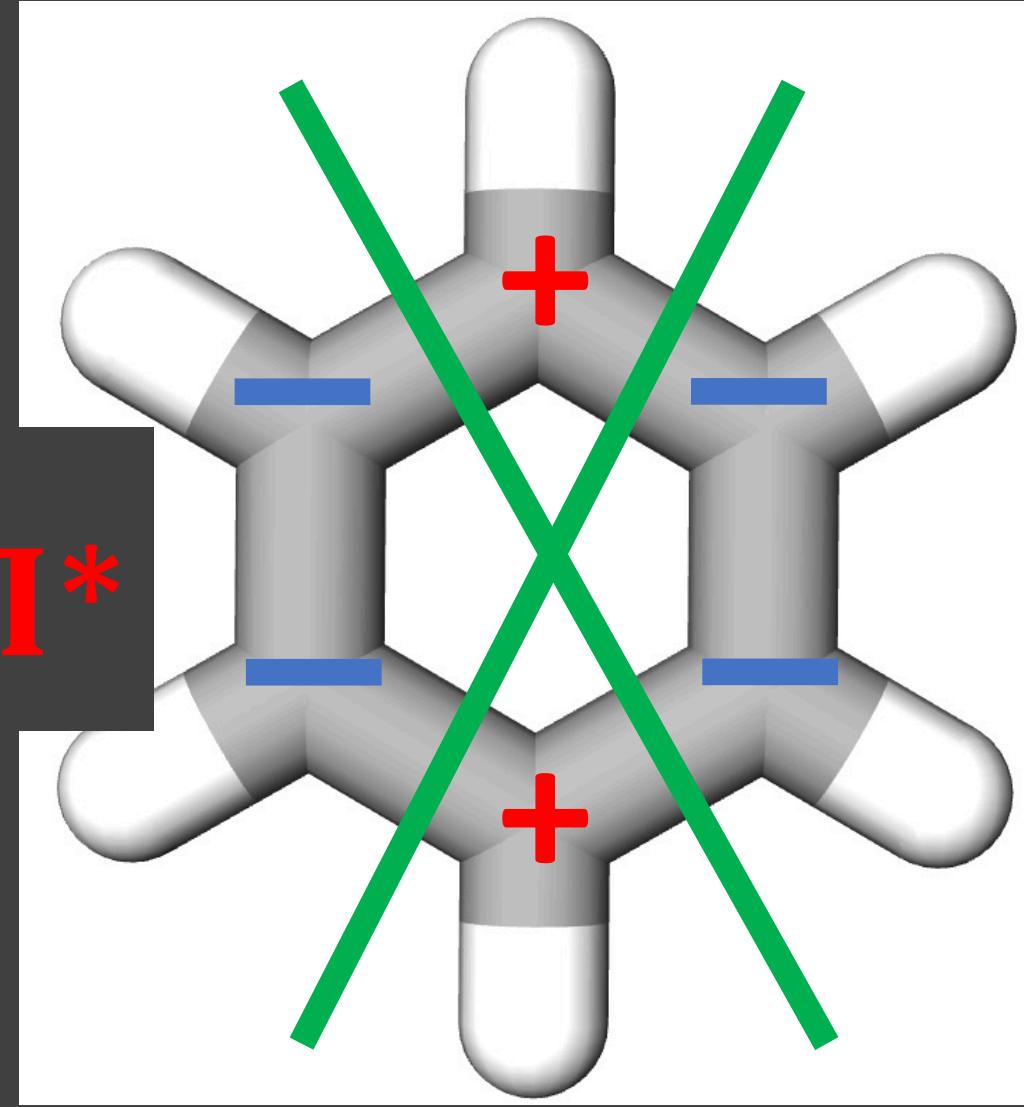

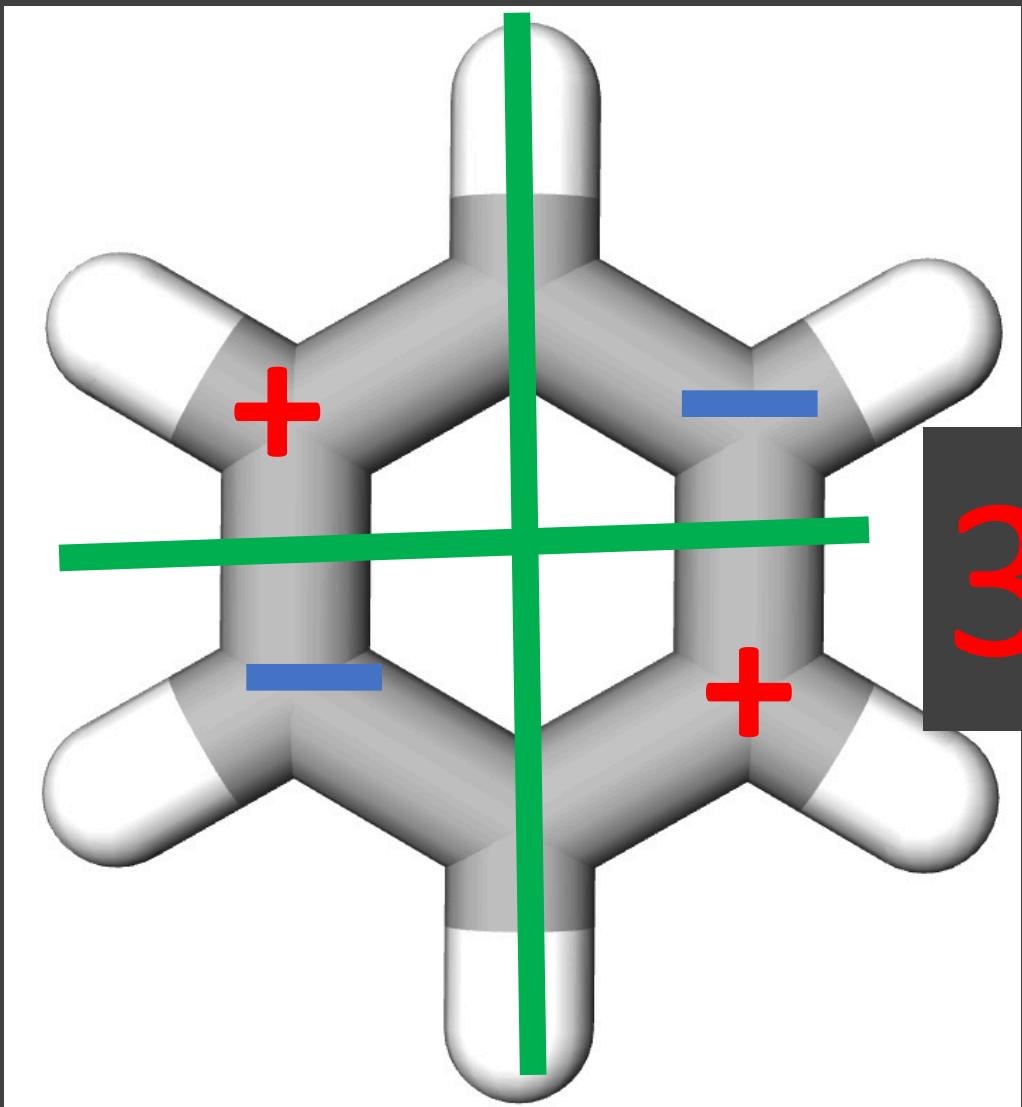

1π

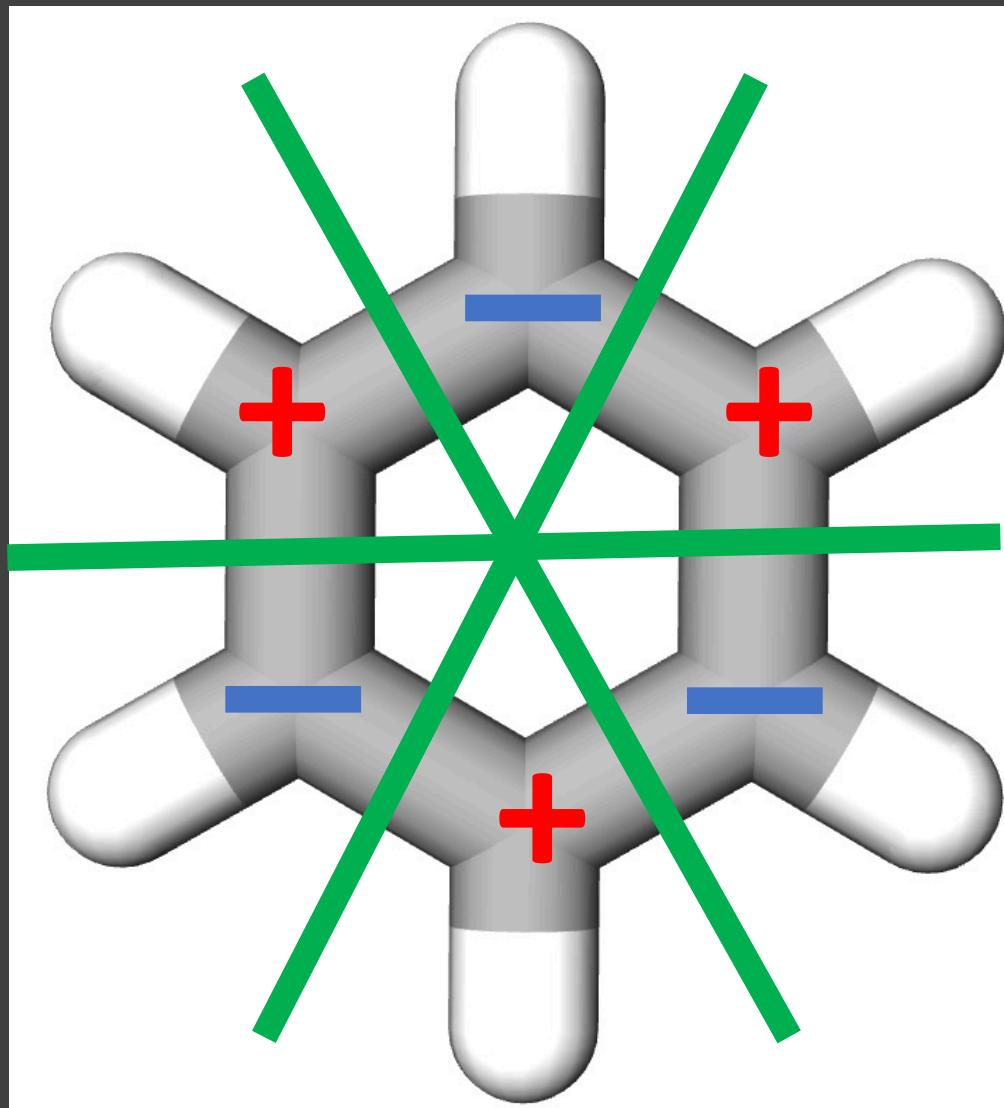

2π

$4\pi^*$

$2p$ —— $\times 6$

6 atomic orbitals
combine to give 6
molecular orbitals
