## A2 Physical Chemistry

## Calculating the pH of Strong Acids

Download slides and other resources at ChemistryTuition.Net

## Strong Acids

Strong acids are completely dissociated (broken down) into ions, e.g. hydrochloric and sulphuric acids when added to water.

Both hydrochloric and sulphuric acids are strong acids.
$\mathrm{HCl}_{(\mathrm{aq})} \rightarrow \mathrm{H}^{+}{ }_{(\mathrm{aq})}+\mathrm{Cl}_{(\mathrm{aq})}$
$\mathrm{H}_{2} \mathrm{SO}_{4(\text { aq })} \rightarrow 2 \mathrm{H}^{+}{ }_{(\mathrm{aq})}+\mathrm{SO}_{4}{ }^{2-}{ }_{(\text {aq })}$

## Number of Protons Released

Monoprotic acid = acid that releases one $\mathbf{H}^{+}$ion per molecule $\mathrm{HCl}, \mathrm{CH}_{3} \mathrm{COOH}, \mathrm{HNO}_{3}$

Diprotic acid = acid that releases two $\mathbf{H}^{+}$ions per molecule
$\mathrm{H}_{2} \mathrm{SO}_{4}, \mathrm{HOOC}-\mathrm{COOH}$

Triprotic acid = acid that releases three $\mathbf{H}^{+}$ions per molecule
$\mathrm{H}_{3} \mathrm{PO}_{4}$

## The pH Scale $\mathrm{pH}=-\log _{10}\left[\mathrm{H}^{+}\right]$

The log scale allows a large range of $\left[\mathrm{H}^{+}\right]$to be represented easily.

| $\mathbf{p H}$ | $\left[\mathbf{H}^{+}\right]$ |
| :---: | :--- |
| 0 | 1 |
| 1 | 0.1 |
| 2 | 0.01 |
| 3 | 0.001 |
| 6 | 0.0001 |
| 6 | 0.00001 |
| 6 | 0.000001 |
| 7 | 0.0000001 |
| 8 | 0.00000001 |
| 9 | 0.000000001 |
| 10 | 0.000000001 |
| 11 | 0.00000000001 |
| 12 | 0.000000000001 |
| 13 | 0.0000000000001 |
| 14 | 0.00000000000001 |

## Strong Acids - pH calculations 1

 What is the pH of $0.20 \mathrm{~mol} \mathrm{dm}^{-3} \mathrm{HCl}_{(\mathrm{aq)}}$ ?$\left[\mathrm{H}^{+}\right]=0.20 \mathrm{~mol} \mathrm{dm}^{-3}$
$\mathrm{pH}=-\log _{10}\left[\mathrm{H}^{+}\right]$
$\mathrm{pH}=-\log _{10}(0.2)$
$\mathrm{pH}=0.70$

## Strong Acids - pH calculations 2

What is the concentration of a solution of $\mathrm{HNO}_{3(\mathrm{aq})}$ with a $\mathrm{pH}=1.10$ ?
$\left[\mathrm{H}^{+}\right]=10^{-1.10}$
$\left[\mathrm{H}^{+}\right]=7.94 \times 10^{-2} \mathrm{~mol} \mathrm{dm}^{-3}$
$\left[\mathrm{HNO}_{3}\right]=7.94 \times 10^{-2} \mathrm{~mol} \mathrm{dm}{ }^{-3}$

## Strong Acids - pH calculations 3

What mass of $\mathrm{H}_{3} \mathrm{PO}_{4}$ is required to make up $250 \mathrm{~cm}^{3}$ solution of pH 2.35 ?
$\left[\mathrm{H}^{+}\right]=10^{-0.35}$
$\left[\mathrm{H}^{+}\right]=0.447 \mathrm{~mol} \mathrm{dm}^{-3}$
$\left[\mathrm{H}_{3} \mathrm{PO}_{4}\right]=0.149 \mathrm{~mol} \mathrm{dm}^{-3}$
Mols of $\mathrm{H}_{3} \mathrm{PO}_{4}$ in $250 \mathrm{~cm}^{3}=0.149 \times 0.250=3.72 \times 10^{-2} \mathrm{~mol}$
Mass of $\mathrm{H}_{3} \mathrm{PO}_{4}=3.72 \times 10^{-2} \times 98=3.65 \mathrm{~g}$

## Strong Acids - pH calculations 4

Calculate the pH of the solution formed when $100 \mathrm{~cm}^{3}$ of water is added to $50 \mathrm{~cm}^{3}$ of $0.100 \mathrm{~mol} \mathrm{dm}^{-3} \mathrm{HNO}_{3}$.
$\left[\mathrm{H}^{+}\right]$in original solution $=0.100$
$\left[\mathrm{H}^{+}\right]$in diluted solution $=0.100 \times \frac{\text { old volume }}{\text { new volume }}$

## Strong Acids - pH calculations 4

Calculate the pH of the solution formed when $100 \mathrm{~cm}^{3}$ of water is added to $50 \mathrm{~cm}^{3}$ of $0.100 \mathrm{~mol} \mathrm{dm}^{-3} \mathrm{HNO}_{3}$.
$\left[\mathrm{H}^{+}\right]$in original solution $=0.100$

$$
\begin{aligned}
& {\left[\mathrm{H}^{+}\right] \text {in diluted solution }=0.100 \times \frac{50}{150}=0.0333} \\
& \mathrm{pH}=-\log 0.0333 \\
& \mathrm{pH}=1.47
\end{aligned}
$$

## Strong Acids - pH calculations 5

Calculate the pH of the solution formed when $250 \mathrm{~cm}^{3}$ of $0.300 \mathrm{~mol} \mathrm{dm}^{-3}$ $\mathrm{H}_{2} \mathrm{SO}_{4}$ is made up to $1000 \mathrm{~cm}^{3}$ solution with water.
$\left[\mathrm{H}^{+}\right]$in original solution $=2 \times 0.300=0.600$
$\left[\mathrm{H}^{+}\right]$in diluted solution $=0.600 \times$ old volume new volume

## Strong Acids - pH calculations 5

Calculate the pH of the solution formed when $250 \mathrm{~cm}^{3}$ of $0.300 \mathrm{~mol} \mathrm{dm}^{-3}$ $\mathrm{H}_{2} \mathrm{SO}_{4}$ is made up to $1000 \mathrm{~cm}^{3}$ solution with water.
$\left[\mathrm{H}^{+}\right]$in original solution $=2 \times 0.300=0.600$
$\left[\mathrm{H}^{+}\right]$in diluted solution $=0.600 \times \frac{250}{1000}=0.150$
$\mathrm{pH}=-\log 0.150$
$\mathrm{pH}=0.82$

## Ionic Product of Water

In pure water, a tiny proportion of water molecules are dissociated. $\mathrm{H}_{2} \mathrm{O} \rightleftharpoons \mathrm{H}^{+}+\mathrm{OH}^{-}$
$\mathrm{K}_{\mathrm{c}}=\frac{\left[\mathrm{H}^{+}\right]\left[\mathrm{OH}^{-}\right]}{\left[\mathrm{H}_{2} \mathrm{O}\right]}$
$\left[\mathrm{H}_{2} \mathrm{O}\right.$ ] is so much larger than $\left[\mathrm{H}^{+}\right]$and $\left[\mathrm{OH}^{-}\right]$ it is effectively a constant number.
$\mathrm{K}_{\mathrm{c}}\left[\mathrm{H}_{2} \mathrm{O}\right]=\left[\mathrm{H}^{+}\right]\left[\mathrm{OH}^{-}\right]$

## Ionic Product of Water

$\mathrm{K}_{\mathrm{c}}\left[\mathrm{H}_{2} \mathrm{O}\right]=\left[\mathrm{H}^{+}\right]\left[\mathrm{OH}^{-}\right]$
This is also a constant

$$
\mathrm{K}_{\mathrm{w}}=\left[\mathrm{H}^{+}\right]\left[\mathrm{OH}^{-}\right]
$$

## pH of Pure Water

$$
\begin{aligned}
& \mathrm{K}_{\mathrm{w}}=\left[\mathrm{H}^{+}\right]\left[\mathrm{OH}^{-}\right] \quad \text { In pure water }\left[\mathrm{H}^{+}\right]=\left[\mathrm{OH}^{-}\right] \\
& \mathrm{K}_{\mathrm{w}}=\left[\mathrm{H}^{+}\right]^{2}
\end{aligned}
$$

$$
\text { At } 298 \mathrm{~K}, \mathrm{~K}_{\mathrm{w}}=1.00 \times 10^{-14} \mathrm{~mol}^{2} \mathrm{dm}^{-6}
$$

$$
1.00 \times 10^{-14}=\left[\mathrm{H}^{+}\right]^{2}
$$

$$
\left[\mathrm{H}^{+}\right]=1.00 \times 10^{-7}
$$

$$
\mathrm{pH}=-\log _{10}\left(1.00 \times 10^{-7}\right)
$$

## pH of Pure Water

$\mathrm{H}_{2} \mathrm{O} \rightleftharpoons \mathrm{H}^{+}+\mathrm{OH}^{-} \quad \Delta \mathrm{H}=$ endothermic

As the temperature is increased, the equilibrium shifts towards the products.

Therefore, $\left[\mathrm{H}^{+}\right]$and $\left[\mathrm{OH}^{-}\right]$both increase.
$\mathrm{K}_{\mathrm{w}}$ increases and pH decreases
However the water is still neutral as $\left[\mathrm{H}^{+}\right]=\left[\mathrm{OH}^{-}\right]$
